

Waiting area with under floor transducers on floating shelves

Transducer and generator placed on shelving unit

Transducer installed in office on high corner floating shelf

Waiting area, second view

MCHN services provide new parents with support and health checks for their newborn babies and children. Hume City Council refurbished its MCHN suites with an acoustically rated fitout, but a lack of background sound did not allow complete privacy.

Soundmask added a Soundmask system to increase the privacy rating so that confidential conversations were completely private.

Due to the nature of the retrofit, a more creative solution was required, with under floor transducers placed on discrete shelves. The outcome was an unobtrusive, safe and effective installation.
