

Transducer placed unobtrusively on top of shelving unit

Closer view of transducer on shelving unit

Transducer in second treatment room

Liforce reception area

Liforce offers a wide range of Osteopathy services at their Malvern suites. Speech privacy was an issue, because clients are providing private information to their treating practitioner.

After having tried to solve the privacy issues by adding carpet to the walls, insulation within the ceiling cavity and playing music, Liforce finally came across the Soundmask system.

Soundmask installed a system, placing under floor transducers on shelving units within the treatment rooms. This creates an even spread of sound. In the words of the client, "it is always so effective for our needs".
