

# Providing Patient Confidentiality through the Soundmask System

“ I was on edge when clients arrived early for appointments and could overhear conversations. In fact I lost one client because he overheard a confidential conversation with a stressed client. ”

Theresa J. Schneider

No one wants to lose patients. But when your patients entrust you with their confidential health information, hearing conversations from adjoining rooms can quickly destroy the relationship of trust. It can also breach health privacy legislation, putting your practice at risk.

Soundmask is a global leader in the provision of professional advisory protection. Installing a Soundmask system in your office protects you by:

- > ensuring speech privacy
- > improving patient comfort
- > maintaining patient trust
- > avoiding litigation for privacy breaches

A Soundmask system is a modest investment that will safeguard your practice and provide value for years.

## HOW IT WORKS

We install a modular system, specified to your requirements. The system imparts a non-intrusive, scientifically shaped masking sound into the affected area. Your practice, staff and patients are protected.

Soundmask's systems are purpose built, quality assured, accredited and compliant. Call for an on-site quote or to arrange a demonstration at your convenience.
