

Transducer blends unobtrusively into the open ceiling

Transducer in communal hallway integrates discretely

Main open plan work area with high ceilings

Astral Consulting moved into a shared office space to meet the social and cultural needs of its growing staff.

Unfortunately, compared with their previous office, the nature of the new space created some speech privacy issues. Distracting noise was amplified by the open, high ceilings.

Soundmask added a Soundmask system to provide speech privacy and reduce distracting noise within the space. Due to the unobtrusive nature of the system, the landlord was happy for the system to be installed.
