

Foyer had pressed aluminum ceiling

Open plan office area with pop in tiles

Soundmask transducer in open ceiling area

Meeting rooms had acoustic insulation for additional privacy

Shell was refurbishing its Brisbane head office, and wanted to achieve a 5 star environmental rating for the fitout. To achieve this, a background sound level of 40-45dB needed to be added throughout the space.

Having previously installed one of Soundmask's systems on Level 29, it was able to reuse this system, and add additional systems to the other six floors to provide a comfortable acoustic environment for its workers.

Each level had 4 different ceiling surfaces, including acoustic tiles, exposed ceiling, acoustic insulation and pressed aluminium. The system was zoned to allow for an even sound throughout.
